

How to send a fax using eFax

How to Send an EFax

You can fax out to any domestic fax number right from your email! The way it works is that after your email is registered for the service, you can send emails to a special email address that will set the *Destination* number of the fax. The attachment of the email will be translated and faxed *to* that destination!

Here is how to get started!

Steps

1. Address an Email to: DESTINATION_NUMBER@fax.commandlink.com
e.g. 14255551234@fax.commandlink.com
2. Your email address is on file and will set the *from* phone number. Only registered email addresses will be allowed to fax out.
3. Attach a file (pdf, word, etc)
Only the attached file will be faxed to the destination.
TIF, PDF, TXT, JPG, GIF, PNG, DOC, XLS, etc... formats are supported
Subject and Body of the email are ignored, and not sent.
If you want a cover page, please include it in the attachment.
4. Send the email!
5. You will get an email confirming receipt, and another with the result of the fax.
